Needle Felting

Materials

- Felting Needle
- Piece of High Density Foam
- Felting Wool
- Or you can purchase a full starter kit

Directions

1) Tear off a piece of wool and place it on top of the foam block. The block will be your workstation to protect you from the needle.

2) Use the felting needle to repeatedly poke the wool. This will allow the woolen fibers to intertwine and become more dense.

3) Continue to poke the wool, manipulating and forming it into the desired shape.

4) Additional colors can be added by simply tearing off more wool and poking it into the desired shape and location.
